

DELIVERED RMS

RESTAURANT MANAGEMENT SYSTEM

Front of house and back office in one system

ORDER SCREEN • DINE-IN / TAKEAWAY / DELIVERY • CAPTURED FROM THE RUNNING APPLICATION

THE SYSTEM

Restaurant Management System

Front of house and back office in one system. A touch-first order screen handles dine-in, takeaway and delivery, fires KOTs straight to a kitchen display, and settles against table state — while the back office keeps recipes, inventory depletion, staff shifts, purchases and the accounts ledger in step behind it.

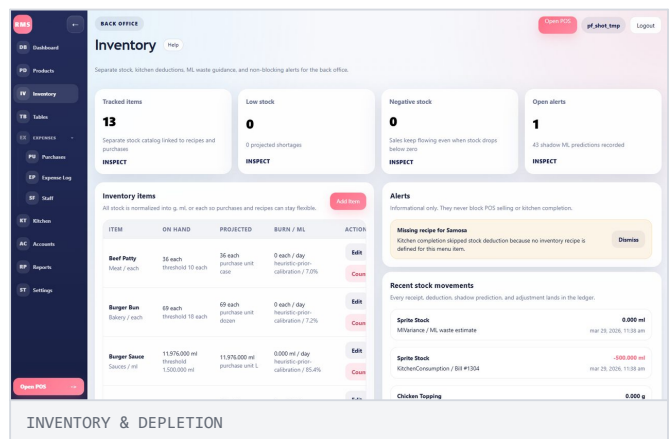

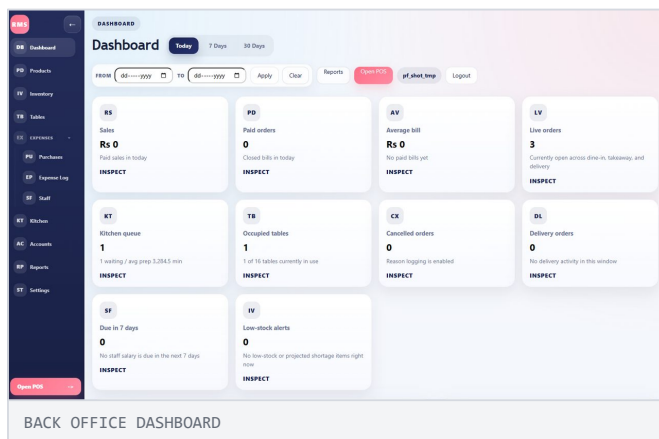

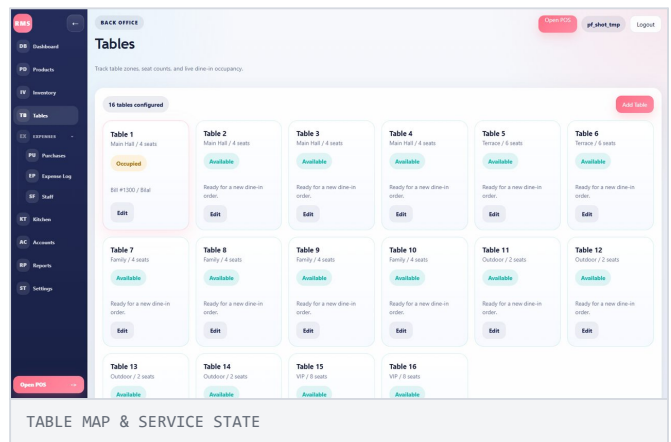

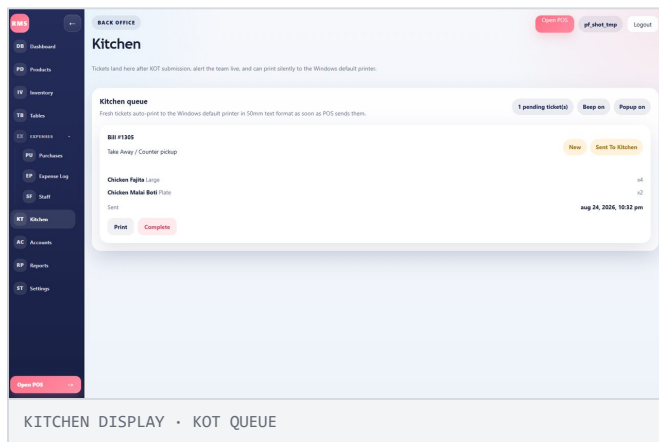

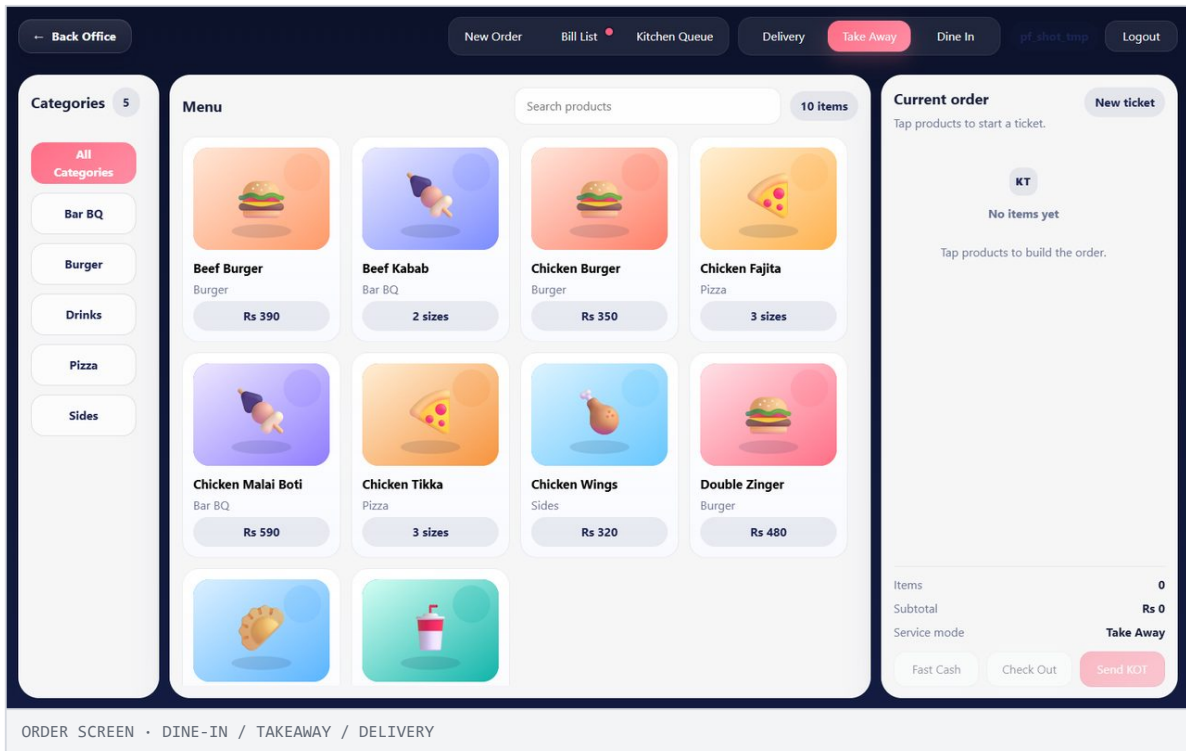

FRONT OF HOUSE	Order screen, bill list, kitchen queue, table map, fast cash
BACK OFFICE	Menu & categories, inventory, staff, purchases, expenses, accounts, reports
INTERFACE	Built for touchscreen terminals and a separate kitchen display
STATUS	Delivered
FIELD	Retail & hospitality

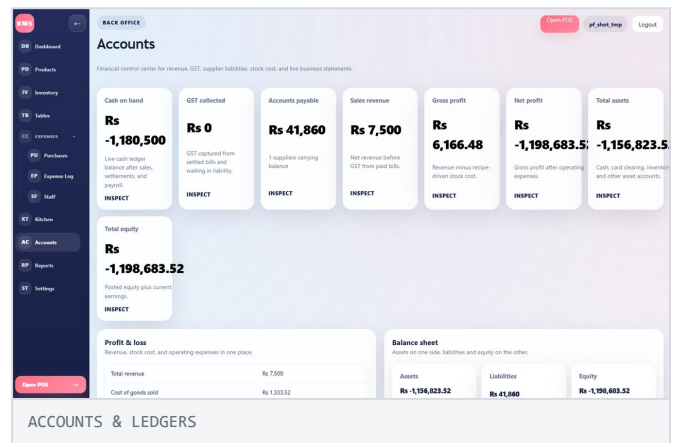

BUILT WITH

Django · Django REST Framework · Python · SQLite · KDS

WORK WITH ME

Retail, POS & inventory software

I build line-of-business software for organisations that cannot afford it to be wrong. This project is one of 32 systems I have delivered; four are running in daily production.

- Point-of-sale with barcode scanning, thermal receipts and offline-tolerant checkout.
- Inventory, purchase orders, suppliers, expiry alerts and low-stock reporting.
- Double-entry accounting: trial balance, profit & loss, ledgers and party statements.
- Tax handling wired to product categories so staff cannot drift the rate.

HOW I WORK

- I work close to the people who will use the system, not from a spec document alone.
- You get the source, the database schema, and a local setup that actually runs.
- Clear milestones, and a demo build you can click through at each one.
